

# The Complete Landscaping Service

At Whiting Landscape we offer a comprehensive range of services to cover every aspect of landscape construction for the commercial sector and major domestic gardens.

Established in 1977, our enviable reputation for excellence in the industry has been earned through dedication to quality, versatility and reliability.

Wherever you are in the UK, Whiting offers a full nationwide service thanks to our centrally located Head Office and Nursery facility adjacent to the motorway network. Through our skilled and motivated workforce, we are committed to offering our clients a superior level of service and helping them realise the full creative possibilities of modern landscaping and techniques.

## Emphasis on Ecology

It's easy to pay lip service to environmental concerns, but at Whiting Landscape we are deeply committed to the ecology of our projects and their impact on the environment. We can ensure that your project makes the most of natural resources, increases biodiversity and creates new habitats whilst keeping up to date with the latest legislation.

We work closely with fully qualified ecology teams that can be involved from the pre-development stage. That way our expertise makes programming and budgeting a more accurate, streamlined process and we can oversee every part of the project, safeguarding the ecological balance of the scheme and its impact on the environment.

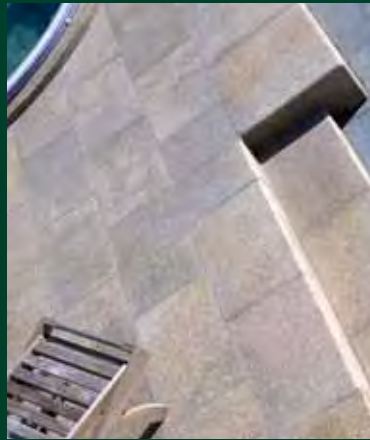

## Superior Soft Landscaping

High quality soft landscaping is achieved through a combination of excellent stock and a well trained workforce. Providing both, Whiting Landscape can manage the process, from procurement and installation through to aftercare.

Our aim is to allow you to commit your project to us with total confidence, knowing it will be completed, on time and to budget, using only quality plant stock sourced from Europe's finest nurseries. The high standards and reliability don't end there, our aftercare service means you can be sure the long term value of your investment will be maintained, year in, year out.

## High Quality Hard Landscaping

Specialised expertise and knowledge puts Whittings hard landscaping capabilities in a class of their own. From footpaths to water features, retaining walls to timber structures we have the expertise and the craftsmanship to deliver lasting results with a superior finish.

Our skills cover the coordination and installation of a full range of materials, including granite, cobbles, stone slabs, block pavers and decorative asphalt. By insisting on high calibre products combined with painstaking attention to detail, we give your hard landscaping project the edge in quality and impact.

## Facilities Management and Maintenance

Entrusting the care and upkeep of the finished project to Whittings means your investment in landscaping will be protected. Our Facilities Management and Maintenance division is separate from our core business providing a single minded, totally focused service.

This ensures that your project always looks its best, maintained by dedicated specialists. We can also provide services such as roadsweeping, snow clearance and gritting, gulley cleaning and lighting maintenance to keep the external environment in peak condition all year round.

## Domestic Gardens with a Difference

Whiting Landscapes abilities transfer seamlessly to domestic gardens of a suitable size or significance. We understand that successful major domestic gardens have a unique character that requires a creative use of space and this is reflected in our approach.

With hard and soft landscaping services available, both using the highest quality materials and stock, entire projects can be entrusted to us if required, including the design and installation of lake, pond or water features. For a garden that feels immediately established or needs screening, we can advise on the planting of mature shrubs and instant hedging, as well as semi mature trees.

## Providing a Mature Solution

Instant impact can be achieved on any scheme through the use of semi mature trees and plants. Whiting's experience and expertise provides the client with confidence that their investment will be of the highest quality, skilfully installed and established, to increase the aesthetic effect of any project.

Whiting's ability to container grow semi mature trees provides the flexibility to plant outside of the recognised planting season, ensuring that projects can be completed at any time of the year. Our specialist aftercare teams are dedicated to the establishment and continued well being of the trees to provide a lasting legacy which will enhance the environment.

## Effective Design and Build

By calling in Whiting Landscape at the earliest stage of a development you will minimise costs and maximise quality. By taking a complete overview from the start we can create a coherent design that fully answers the brief and works within a pre set budget.

Our involvement from the beginning means we take sole responsibility for the landscaping of the project and allows coherence with all aspects of the external environment, enabling us to create and install a scheme that harmonises perfectly with its natural surroundings.

## Purpose Built Nursery

At any one time Whittings have up to 2500 container grown trees held at our purpose built nursery facility in Worcestershire. Here we can containerise the best material and are able to contract grow stock, withdrawing it from the open market. The result: higher quality and guaranteed availability.

Long term procurement also enables fixed budgeting early in the project that is unaffected by shortages or cost fluctuations. And because we originally buy the stock at an early stage of its growth, we can pass on cost savings whilst maintaining the highest nursery standards for a higher quality, more cost effective landscape scheme.
